

SOUNDADVICE

For the discerning sound installer

How to install intelligible sound in an hour . . . instead of days!

Graduates are heard loud and clear.

Bridgewater State College, Bridgewater, MA, needed a new, high-quality sound system for its 2001 graduation ceremony. A storm had destroyed its 100' by 200' tent, as well as its sound equipment, last year. Soundsphere loudspeakers were part of the solution.

"When I told them that they would only need two speakers and less than one hour of setup time, they found it hard to believe"

– Stan Loring, Loring Services, Inc.
Soundsphere Installer, Stoughton, MA

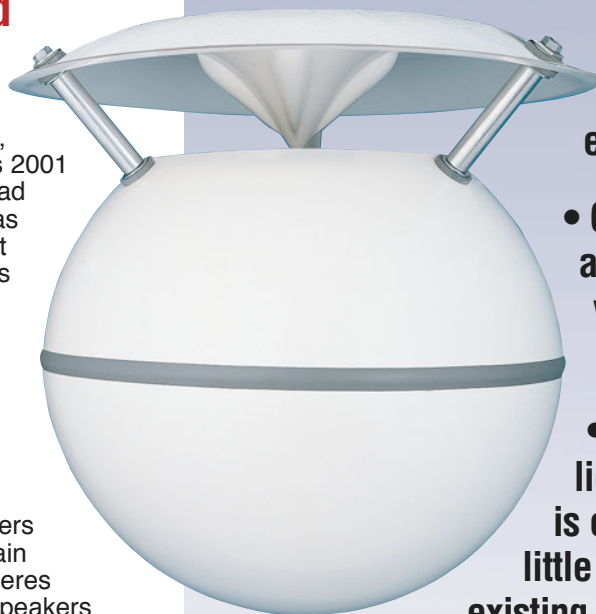

Two Soundsphere Q-12A speakers were quickly mounted on the main poles of the tent. The Soundspheres replaced the 24+ conventional speakers that had been installed in the previous tent. Instead of two days of wiring and installation, each Soundsphere was installed in about 15 minutes, so only one hour was needed for setup and sound check.

Courtesy of Soundsphere, everyone in the crowd of over 4000 clearly heard all the sounds of graduation.

"Many people, from administrators to students, commented on the quality of the sound. It was crisp, clean and clear from all sections of the tent... This was one of the best investments we've made."

– Janine M. Boutin
Mgr. of Media Service
Bridgewater State College

Model Q-12A

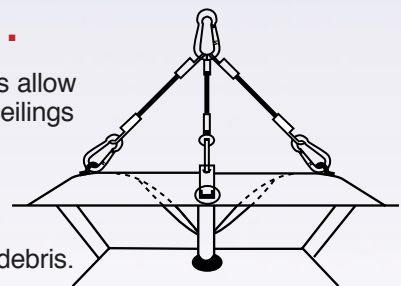

- Broad, 180° x 360° dispersion produces even coverage

- Clear, intelligible sound, accurate, full-range vocals and high fidelity music reproduction

- A self-contained, lightweight unit that is easily installed with little or no stress on existing architecture

Easy Installation . . .

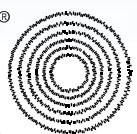

Hanging kits, brackets and clips allow for quick installation on walls, ceilings or floors. Our units can also be easily hung from beams, pipes and suspended ceilings. Bird screens and filters protect against intruders and airborne debris.

The unobtrusive, contemporary shape and numerous custom colors of our speakers will complement any decor.

The best sound aroundSM
