

SOUNDADVICE

For the discerning sound installer

Ensure full coverage in the largest of places

- Broad, 180° x 360° dispersion produces even coverage
- Clear, intelligible voice and accurate full range music reproduction
- A self contained, lightweight unit that is easily and quickly installed

"This Gym Rocks" – Soundsphere Provides Big Sound for a Big Place

Model Q-12A

Attendees of games and other events at Warren Woods Tower High School's gymnasium in Warren, Michigan, just weren't getting the message. The large gymnasium's sound system consisted of horn loudspeakers that delivered poor speech intelligibility and inadequate music reproduction.

Premier Sound & Communications, Inc. met the challenge of designing and installing a new sound system that would produce high quality speech intelligibility and full range music in what was one of the largest gymnasiums they had ever encountered. Premier Sound chose to utilize four

"This gym rocks! The students and faculty love it."

– Jerry Stoiko
Sales Engineer
Premier Sound & Communications, Inc.
Sterling Heights, MI

Soundsphere Model Q-12A loudspeakers to cover the large bleacher sections and game floor completely. One Soundsphere QSB-2 subwoofer was included to produce the extended low frequency response required for the music common in today's sports venues.

Since no complex physical alignments are required to produce excellent results with Soundsphere loudspeakers, the installation was completed quickly with minimal disruption to daily gymnasium activities. Premier Sound's senior audio engineer, Dave Cenkner, says, "Equalization, using a real-time analyzer, completed the installation with the final result being a clean, natural sound. The Soundsphere speaker system, mated to high quality electronics, produced astounding results."

Robert D. Livernois, Ph.D., Warren Woods Tower High School's Principal, rates the system and installation as "Outstanding!...The Soundsphere system reproduces human voice and music incredibly well. This, in turn, has had a positive effect on fan participation, as they can hear things so clearly."

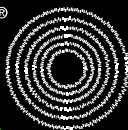

The QSB-2 loudspeaker is a great complement to the Q-12A, providing low frequency response at high sound pressure levels.
