

SOUNDADVICE

For the discerning sound installer

Integrate high-quality sound into your video systems... simply and easily!

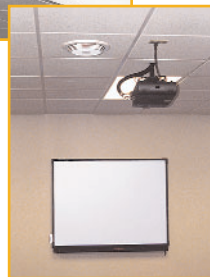

- Broad, 180° x 360° dispersion produces even coverage with fewer speakers
- Proprietary 8" coaxial driver, optimized for use with patent-pending acoustical diffusion technology, creates clear, intelligible voice announcements and full-range music
- A self-contained, lightweight unit, shipped in one carton and easily installed

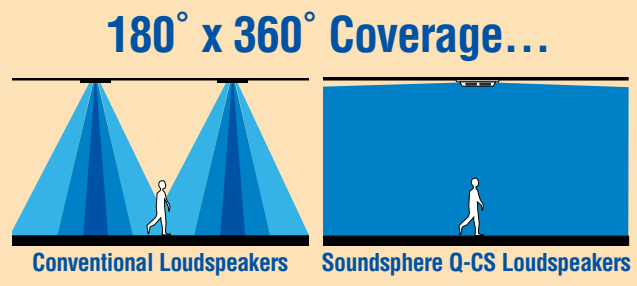

Model Q-CS

Enhance Your Projector's Sound – Without Breaking Your Budget

When the sales team at CCS Presentation Systems, one of the nation's largest full-service audio/video system providers, needed a superior sounding, cost-effective audio solution for their small-format projection systems, audio system designer Darrell Skinner knew exactly where to turn: Soundsphere Loudspeakers.

CCS set to work designing a full audio package around Soundsphere's Q-CS Loudspeaker, a model ideal for hemispherical dispersion of clear speech and full-range music in low-ceiling applications. The unique wide coverage and quality sound of the Q-CS enabled CCS to develop the EPA (Enhanced Projector Audio) system, a self-powered, self-contained sound package that, with a single speaker, greatly improves the audio performance of ceiling-mounted projectors in rooms up to 30' x 30'. Typical

applications for the EPA include conference rooms, small lecture halls and classrooms. Over the last year, the popularity of the EPA has steadily grown among CCS's business, nonprofit and educational clients, thanks to the Q-CS's 360°, full-range coverage, ease of installation and affordable price tag.

Soundsphere makes it easy for CCS to add electronics to the Q-CS for direct integration into projection systems by providing them

"The Q-CS takes less than an hour to modify and install, and just one speaker covers the same area as four traditional speakers. For this application, it offers a great middle ground between the projector's built-in speakers and a full sound system."

*– Darrell Skinner, Audio System Designer
CCS Presentation Systems*

the speakers direct from the factory in a custom configuration. "We receive the speakers and can have them modified and installed in less than an hour," says Skinner. "We've just developed the EPA package in the last year, but it really seems to be catching fire, especially in schools, due to the low cost and overall convenience of the Q-CS."
